KBAL SPEAN, THE ACCB & BANTEAY SREY

Explore the sacred mountains of Cambodia and witness one of Cambodia's wildlife rehabilitation and rescue programs

The Siem Reap River originates in the sacred mountain of Phnom Kulen, some 50km northeast of Siem Reap. Our route passes through timeless rural Cambodian villages and countryside before we stop at the dry deciduous forest near the slopes of the mountains. From here we will visit Kbal Spean, walking through protected forest to see the famous carved lingas in the stream-bed. There is also the opportunity to visit the Angkor Center for Conservation and Biodiversity (ACCB), the first nature conservation and endangered wildlife rescue and breeding center in Cambodia.

Day 1: Kbal Spean, the ACCB and Banteay Srey

"We are not "birders" but a friend recommended this company.

We spent a half day - first birding in a dry forest and then at Angkor Center for Conservation.

We had a fantastic time.

Our guide, Hang, was excellent. We learned so much from him. Our driver was great. And the tour of ACCB was interesting, thoughtful and very special.."

Tom Bolger, USA, 28th June 2022
